

OperationsHub Data Report

SAGE uber-export 2026-09-11 - report generated 2026-09-10 from `JSON/` at commit 27137dd. Aephia Industries.

- 1. 1. What changed
- 2. 2. Recipes
- 3. 3. Claim stake buildings
- 4. 4. Resources
- 5. 5. Galaxy map
- 6. 6. Ships
- 7. 7. Ship components
- 8. 8. How the data was imported and verified

1. What changed

The repository now carries the SAGE uber-export of **2026-09-11**, replacing the export of 2026-05-23. The table compares the previous import (git `HEAD~1`) with the current data.

Dataset	Previous	Current	Delta
Recipes	3,414	5,251	+1,837
Buildings	1,900	1,620	-280
Claim stake definitions	195	10	-185
Resources (all variants)	3,572	3,526	-46
Star systems	945	945	=
Planets	3,901	3,901	=
Planet resource entries	98,706	46,376	-52,330
Ships	67	67	=
Ship components	1,119	3,756	+2,637
Crafting hubs / stations / cargo	5 / 4 / 5	5 / 4 / 5	

- **Recipes:** 2,283 new output names, 165 removed. New entries are dominated by ship weapons, countermeasures, missiles and per-class component recipes.
- **Buildings:** 103 new, 157 removed; every building now exists in exactly five tiers (324 per tier). Claim stake definitions collapsed from 195 variants to 10 (Claim Stake T1-T5, Cultivation Stake T1-T5); the `defaultBuilding` field is gone and no explorer read it.
- **Planets:** same map, but resources per planet were rebalanced (98,706 to 46,376 entries; richness now spans 0.3-7 instead of 1-4.6) and 3,868 of 3,901 planets plus 924 systems carry lore names.
- **Ships:** 61 of 67 ships changed stats; a new `xp_value` stat was added.
- **Ship components:** the export now ships a complete component tree (3,756 nodes, 6 roots). It resolves every component id the ship configurations reference; the previous hand-rebuilt tree resolved only 674 of 1,573, so Ship Explorer analytics were partial since May.

2. Recipes

By resource type

Type	Recipes	Share
Component	3,575	68.1%

The 93 raw resources

Resource	Tier	Base value	Planet types
Arco	T1	10	terrestrial, barren, gas-giant
Biomass	T1	10	terrestrial, oceanic
Carbon	T1	10	volcanic, dark
Chromite Ore	T1	10	oceanic, dark, ice-giant
Copper Ore	T1	10	terrestrial, oceanic
Hydrogen	T1	10	oceanic, ice-giant, gas-giant
Iron Ore	T1	10	terrestrial, barren
Ironshell Cactus	T1	10	barren
Krypton	T1	10	ice-giant, gas-giant
Lumanite	T1	10	volcanic, dark, ice-giant
Magmaroot	T1	10	volcanic
Neodymium Ore	T1	10	volcanic
Nitrogen	T1	10	terrestrial, ice-giant, gas-giant
Osmium Ore	T1	10	dark
Pyroclast Energen	T1	10	volcanic
Quartz Crystals	T1	10	terrestrial, oceanic, ice-giant
Rhenium Ore	T1	10	volcanic, barren, gas-giant
Shadowmoss	T1	10	dark
Silica	T1	10	terrestrial, volcanic
Silicon Crystal	T1	10	oceanic, ice-giant
Sodium Crystals	T1	10	volcanic, barren, gas-giant
Tantalum Ore	T1	10	volcanic, barren, dark
Thermal Regulator Stone	T1	10	terrestrial, volcanic, barren
Tidal Kelp	T1	10	oceanic
Tin Ore	T1	10	terrestrial, oceanic
Tritium Ore	T1	10	oceanic, ice-giant
Zinc Ore	T1	10	terrestrial
Aluminum Ore	T2	20	barren, ice-giant
Argon	T2	20	dark, ice-giant, gas-giant
Bastion Agave	T2	20	barren
Bioluminous Algae	T2	20	oceanic

Resource	Tier	Base value	Planet types
Blazing Snapdragon	T2	20	volcanic
Boron Ore	T2	20	barren, gas-giant
Diamond	T2	20	volcanic, barren, dark
Electric Fern	T2	20	terrestrial
Fluorine Gas	T2	20	volcanic, ice-giant, gas-giant
Garnet Crystals	T2	20	ice-giant
Gold Ore	T2	20	terrestrial
Hafnium Ore	T2	20	barren, ice-giant
Hicenium Crystals	T2	20	ice-giant
Iridium Ore	T2	20	volcanic
Jasphorus Crystals	T2	20	barren
Lithium Ore	T2	20	barren, dark
Manganese Ore	T2	20	volcanic, gas-giant
Methane	T2	20	dark, ice-giant, gas-giant
Oxygen	T2	20	terrestrial, oceanic, ice-giant
Peridot Crystals	T2	20	volcanic, ice-giant
Phase Shift Crystals	T2	20	oceanic
Raw Chisenic	T2	20	dark
Resonium Ore	T2	20	barren
Rochinol	T2	20	volcanic, ice-giant, gas-giant
Ruby Crystals	T2	20	barren, dark, ice-giant
Scandium Ore	T2	20	gas-giant
Silver Ore	T2	20	barren, dark, gas-giant
Spectral Lichen	T2	20	dark
Swiftvine	T2	20	terrestrial
Temporal Flux Orchid	T2	20	terrestrial
Tenon Gas	T2	20	gas-giant
Thermodyne	T2	20	volcanic, oceanic
Thermoplastic Resin	T2	20	terrestrial, volcanic
Topaz Crystals	T2	20	barren, dark, ice-giant
Xenon	T2	20	dark, ice-giant, gas-giant
Aegis Barrier Cactus	T3	30	barren
Bathysphere Pearls	T3	30	oceanic
Cryo Formation Crystals	T3	30	ice-giant

7. Ship components

3,756 component nodes in a tree of 6 roots. Every one of the 1,573 component ids referenced by the 67 ships' configurations resolves in this tree.

Root	Nodes
Ship Component	997
Ship Module	221
Ship Weapons	1593
Countermeasures	506
Missiles	406
Drones	33

8. How the data was imported and verified

1. `node RefreshData/split-uber-export.js <uber-export.json>` splits the export into the `JSON/` sources. It refuses to write if the component tree does not cover every ship configuration.
2. `npm run refresh` validates every source against its JSON schema (10/10 valid) and regenerates `Data/*.js`.
3. The refresh's "breaking changes" alert compares element [0] of each list, so a re-ordered export reads as removed fields. The field set across all entries was diffed instead: the only true removal is `claimStakeDefinitions[].defaultBuilding`.
4. Verified under Node: every `Data/*.js` loads, `DataLoader` for all five explorer types, seven `CrossExplorerAnalytics` analyses, and a replay of Ship Explorer's component merge and lookup (58,862 configured slots, 0 unresolved).

Export sections not yet used by any explorer: `missions`, `researchGateMap`, `cargoTypes`, `researchNodes`, `starbaseBalance`, `globalCombatConfig`, `levelThresholds`.
